The bacter are used for expressing heterologous proteins, particularly hormones, growth factors, cytokines or especially enzymes, e.g. protease, carbohydrase, lipase, isomerases (racemase, epimerase, tautomerase or mutase), transferase, kinase and phosphatase. CP1-3 are used e.g. in soaps, dishwashing compositions, contact lens cleaners or laundry detergents, also for peptide hydrolysis, waste or textile treatment, to cleave fusion proteins and as animal feed additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 945 BP; 288 A; 180 C; 232 G; 245 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                        coding sequence. The invention relates to new Gram-positive bacteria, especially Bacillus, containing mutations in, or deletion of, at least part of the gene encoding cysteine protease (CP)1 (X25735), CP2 or CP3 (X25735), so that CP-related proteolytic activity is lost. The bacteria are used for expressing heterologous proteins, particularly hormones, growth factors, cytokines or especially enzymes, e.g. protease, carbohydrase, ilpase, isomerases (Tacemase, epimerase, tautomerase or mutase), transferase, kinase and phosphatase. CP1-3 are used e.g. in soaps, dishwashing compositions, contact lens cleaners or laundry detergents, also for peptide hydrolysis, waste or textile treatment, to cleave fusion proteins and as animal feed additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cysteine protease; proteolysis; expres
                                                                                                                                                                                                                                                      Gram-positive bacterium with mutated or deleted gene for cysteine protease 1, 2 or 3 - used to express proteins with reduced proteolytic degradation, e.g. proteins, growth factors or enzymes

The invention relates to new Gram-positive bacteria, especially Bacillus, containing mutations in, or deletion of, at least part of the gene encoding cysteine protease (CP)1 (X25733), CP2 (X25734) or CP3, so that CP-related proteolytic activity is lost. The bacteria are used for expressing heterologous proteins, particularly hormones, growth factors, cytokines or especially enzymes, e.g. protease, carbohydrase, lipase, isomerases (racemase, epimerase, tautomerase or mutase), transferase, kinase and phosphatase. CP1-3 are used e.g. in soaps, dishwashing compositions, contact lens cleaners or laundry detergents, also for peptide hydrolysis, waste or textile treatment, to cleave fusion proteins and as animal feed additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cysteine protease; Gram-positive bacteria; mutiproteolysis; expression; heterologous protein;

use in vaccines for prevention infection. or attenuation of Enterococcus

Claim 1; Page 963-969; 2084pp; English

A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal infection. infection.

V52181/c
       The present invention describes a computer readable medium which has CC the nucleotide sequences SEQ ID NO:1 to 391 (V52134 to V52524) recorded CC on it, or a representative fragment or a sequence at least 95% identical CC to SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 CC to 391 (V52134 to V52524) are genomic fragments from Streptococcus CC pneumoniae. The present invention also describes an isolated nucleic acid CC molecule encoding a homologue of any of the fragments of the S. pneumoniae CC genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced CC by a process comprising: (a) screening a genomic DNA library using as a CC probe a target sequence defined by any of the sequences in SEQ ID NO:1 CC that hybridise to the target sequence and isolating the nucleic acid conclucies from the members; or (b) isolating mRNA, DNA or cDNA produced CC from an organism, amplifying nucleic acid molecules whose nucleotide CC sequence is homologous to amplification primers derived from the conclusion of the S. pneumoniae genome to prime the amplification and CC isolating the amplified sequences. The computer readable medium can be CC sequencts of the S. pneumoniae genome to prime the amplification modulating fragments of the S. pneumoniae genome. Products from the present CC invention can be used in diagnosis kits and assays, and pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7113
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6993
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             6933

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a novel polypeptide, which is optionally expressed in NCIMB 40771. The polypeptide, and polynucleotide encoding it, are derived from Staphylococcus aureus. Cells expressing ligands binding the polypeptide can be used to isolated candidate compounds that bind and inhibit the activity of the polypeptide. Such compounds can be used as an immunogen to vaccinate an animal for protection against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Staphylococcus aureus caused disease.

The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating community readable modium.

The nucleotide sequence at least 95% identical CC to SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae CC genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a CC to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid cC molecules from the members; or (b) isolating mRNA, DNA or cDNA produced CC fragment of the S. pneumoniae genome to prime the amplification and isolating the nucleic acid molecules whose nucleic acid isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome to prime the amplification modulating fragments of the S. pneumoniae genome recial importance, or expression modulating to present on the meaning and he used in diagnosis kits and assavs; and pharmacentical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Вр
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qy

                                                                                                                                                                                                                                                                                                                                                              245208
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting factors, cytokines, antibodies, and growth factors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This DNA sequence from Staphylococcus carnosus includes genes that code for the nitrate reductase molybdenum cofactor blosynthesis proteins MoeB, MoaB, MoaC, MoeB, MoaD, MobA, MoaA, MobB and MoaE (see W26741-49). This gene region was identified following Tn917 insertion mutagenesis studies. Claimed DNA molecules (see T99449-51) can be used in the recombinant production of claimed proteins (see W26733-49) involved in nitrate and nitrite reduction in S. carnosus. These recombinant proteins, or cells expressing them, in free or immobilised form, can be used in a claimed method for reducing nitrate and nitrite in nitrate-polluted water, vegetables and other polluted materials.
